

Klistorin V.I., Novosibirsk

Russia in 1913

The paper discusses the economic development in the Russian Empire in the end of the 19th – early 20th centuries, causes – real and far-fetched – why Russia lagged behind the world leading countries, and issues of cross-country comparisons. In the author's opinion, that time Russia couldn't help developing extensively, but technologically it was close to the leading countries. The economic and political reforms were necessary, but they took place too late. Russian institutional underdevelopment impeded its economic growth but could not stop.

Level of economic development, long-term economic growth, cross-country comparisons, institutions, agrarian policy, agricultural migration, demographic situation, structural shifts

Eastward Vector of the Russian Geopolitics in 1913

The author analyzes the highs and lows of the Russian geopolitics in the Far-East and Central Asia observed before the World War I. He proves that the new features of relations between the Russian Empire and East Asian countries – the latter started their modernization – were defined by the intertwining of Russia's traditional scramble for influence with both friendly expansion of commercial and industrial capitals to prospective markets and strengthening its boundaries. He also shows the challenges and system-based weaknesses of the Russian policy in the East from which Russia could draw salutary lessons on how to build its current relations with Asia Pacific countries.
