

Summary

Kirshin I. A., Datsik A. A., Kazan'

Quality of the Russian Economy Regenerative Growth

The authors of this article think that the current macroeconomic parameters of the domestic economy give a ground to assert, that the stage of regenerative growth in Russia is coming to its end. In their study of the path of Russia's development they make an attempt to answer the following questions. What is price of this growth, its motive forces and restriction? Is it possible that the potential which was put in pawn on a stage of restoration would be able to provide an adequate postindustrial quality of the further growth? The authors also deny a dependence of the Russian economy from export of raw materials.

History of Agriculture in Russia in the Light of Institutional Methodology

Institutional economic theory pays serious attention to historical aspects of economical relations, including collective's behavior. An interaction of collectives is regarded as a system of contracts. Institutional theory was not applied to an analysis of the state and the bodies of peasant self-management relations till now. The author suggests us to regard the structure and the essence of these relations in the frameworks of social and economic history of Russia.
