Russia's Far East Development under the New World Economic Environment

The paper analyzes two challenges of Russia's TASED (Territories of Advanced Social and Economic Development) policy. The first comes from the changes in the world economic environment (structural crisis and changes in multilateral trading system and international production sharing scheme) and the second – from the very nature of Russia's industry and circularity of its domestic links. There is weak participation of Russia's enterprises with international production sharing networks though it has become one of the essential elements of any industrial policy. The author presents his recommendations on how to solve these problems in forming Russia's TASED policy in the course of building the platform allowing the Russian Far East regions to integrate Asian-Pacific Region.

A New Round of Development in Eastern Russia and China Factors

Russia is faced an immediate task of solving economic and social problems of underdeveloped regions of Siberia and the Far East. One of the important factors of their development and main direction of inflow of investments is their cooperation with the neighboring Asian countries. Therefore, orientation to strengthening of ties with Asia-Pacific countries for the purpose of overcoming social and economic backwardness of Siberia and the Far East and development of their economic potential is a compelling need of Russia. The largest strategic partner of Russia in this region is China.

The Increase in Agricultural Production Instead of Sharing Resources

In the coming years in the world and in Russia expected faster growth of input of new capacity for the production of fertilizers compared to the demand for them that will lead to a serious strengthening of competition in international markets. In these circumstances, can clearly be identified the weaknesses of the domestic producers. The article analyzes their causes and the sources of advantages of Russian producers on international markets, the constraints to increasing production of mineral fertilizers, the efficiency of investment in the industry, opportunities to increase sales, including exports, as well as the tradeoff between capacity expansion for the production of products and capabilities of its sales.

Mineral fertilizers, market, competitors, capacities production, export, domestic manufacturers, modernization, agricultural products

Russian-American Company and its Role in the Development of the Far East

The article analyzes the processes of formation of the Russian-American Company, the development of the share capital, the formation of the community of shareholders, as well as the activities of this company's management bodies (Main Board and the colonial administration). It is proved that the main source of revenue of this organization was the fur trade. The company produces in Russian American colonies various types of fur (sea otters and cats, as well as otters, foxes, etc.). Analyzes the markets for furs, the most important of which were Russia and China, including seaports, as well as New York. Particular attention is paid to the activities of the Russian-American Company in the Far East of Russia. It is proved that it has brought great benefit to the region. Some areas (Amur region, Primorye, Sakhalin and the Kuril Islands) were attached to Russia with the direct participation of the company.
